SEAL - AUTIS

Solution for Component Manufacturing Industry

simplifying IT

OVERVIEW

Every industry has its own idiosyncrasies and problems. Fast growing automotive business vertical is no different and faces its own challenges. SEAL brings its deep business process expertise in this domain and combines its *SAP Implementation methodology* to convert the power of SAP Enterprise Solution into measurable business benefits.

Key Industry challenges:

- Visibility in multi location operation
- Operation level subcontracting
- Tracking of material at subcontractors end
- Frequent changes in customer schedule
- Stringent quality requirements for products
- Minimal delivery time
- Compliance to Quality Management system (ISO TS 16946)
- Compliance to Indian tax Law requirement

SEAL's AUITs Solution provides comprehensive solution which takes care of Component Manufacturing industry challenges. The inventory management gives the stock visibility at all locations including subcontractors. The stock analysis can be further drilled down to quality hold stock & rework stock which helps in reducing production loss due to unavailability of material. Non critical & special process are normally subcontracted to vendors, AUITs provide a complete tracking of material movement, vendor payment & 57 F3 challan. EDI solution of SEAL provides EDI integration with customers system which helps in eliminating the communication errors, helps in updating ERP system as per the customer's requirement. The email communication system is integrated with ERP system which updates business partner on time. Manufacturing system optimizes the resource utilization & reduces the wastage. Statistical process control system monitors process & product parameters. The activity based costing keeps track of product cost during the process & helps in maintaining margins. Automatic tax determination & account determination process updates finance ledger on line.

SEAL AUITs Solution offers:

- EDI communication with business partners
- KANBAN schedule trigger for critical items
- Stock production
- Order production
- Vendor evaluation & audit process
- Purchase & contracting process
- Compliance to export / import process
- OEM sales / depot sales & aftermarket sales
- Customer complaint / return handling process
- Warehouse management system for engineering store
- Receipt / In- process / PDIR inspection process
- Calibration process
- Product costing & Profitability analysis
- Profit center & cost center accounting process
- New product development process

Strategic Global Offerings

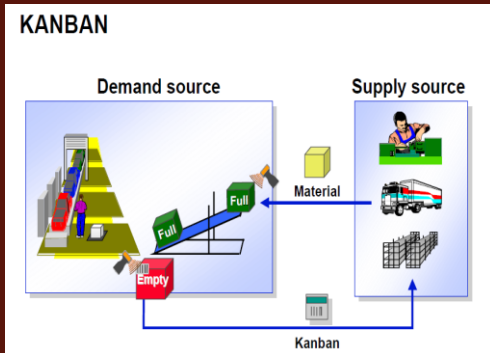

- Strategy Consulting
- End-to-End Solution Delivery
- Application Management & Support
- Staffing

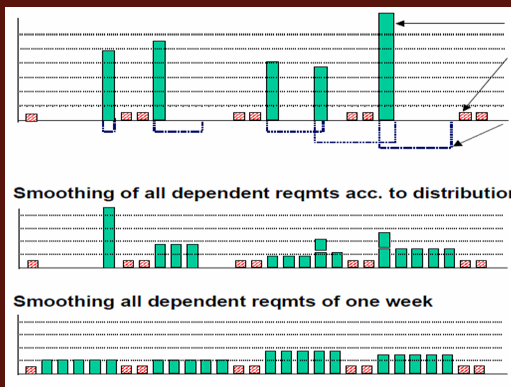

EDI:

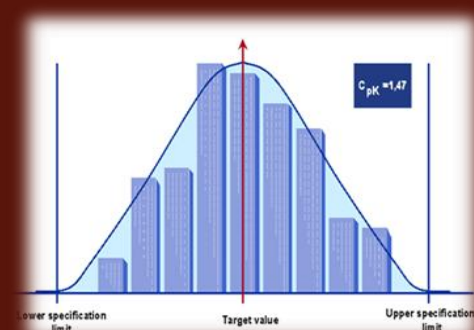

KANBAN:

Line Balancing & Capacity Leveling:

SPC:

Key Features of EDI:

- Integrated with SAP System
- Improves data accuracy
- Lower man power involvement
- Eliminates paper communications
- Accelerate information exchange

Key Features of KANBAN:

- Work on pull principle
- Predefined process inventory
- Quick response to engineering change

Key Features of Line Balancing & Capacity Leveling:

- Improves OEE
- Reduce overtime cost
- Reduces change over time
- Reduces TAKT time

Key Features of SPC:

- Calculates cp & cpK indexes for process capability monitoring
- Applicable for all types of inspection
 - ✓ In coming inspection
 - ✓ In process inspection
 - ✓ Final inspection
- Supports for all types of control charts like:
 - ✓ X bar char
 - ✓ R Chart
 - ✓ nP Chart

Business Benefits:

- Improves sales
- Inventory visibility within & outside the organization
- Reduces order fulfillment time
